Microbiol. Biotechnol. 38:507-513(1993).
FUNCTION: HYDROLYSES B-GLUCANS CONTAINING MIXED BETA-1,3 AND BETA-1,4 LINKAGES. THIS ENZYME IS THERMOSTABLE; ITS OPTIMAL TEMPERATURE IS NEAR 65-70 DEGREES CELSIUS.
CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic linkages in beta-D-glucans containing 1,3- and 1,4-bonds.
MISCELLANEOUS: BETA-GLUCANASES OF BACILLUS HAVE A SUBSTRATE RANGI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SIMILAR TO LICHENASE OF GERMINATING BARLEY. SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SMFLYQNGSEIADGRPWVEVDIEVLGKNPGSFQSNIITGKAGAQKTSEKHHAVSPAADQA 120

SUBUNIT: MAY FORM PART OF A MULTIENZYME COMPLEX (CELLULOSOME).
DOMAIN: A 24 RESIDUES DOMAIN IS REPEATED TWICE IN THIS ENZYME AS WELL AS IN OTHER C.THERMCCELLUM CELLULUSOME ENZYMES. THIS DOMAIN MAY FUNCTION AS THE BINDING LICAND FOR THE SL COMPONERY.
SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             J. Biochem. 204:13-19(1992).

Endo-1,3-1,4-beta-glycanase exoK precursor (EC 3.2.1.-) (Succinoglycan
                                                                                                                               Gosalbes M.J., Perez-Gonzalez J.A., Gonzalez R., Navarro A.;
"Two beta-glycanase genes are clustered in Bacillus polymyxa:
molecular cloning, expression, and sequence analysis of genes
encoding a xylanase and an endo-beta-(1,3)-(1,4)-glucanase.";
J. Bacteriol. 173:7705-7710(1991).
-:- CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic linkages
in beta-D-glucans containing 1,3- and 1,4-bonds.
-:- MISCELLANEOUS: BETA-GLUCANASES OF BACILLUS HAVE A SUBSTRATE RANGE
SIMILAR TO LICHENASE OF GERMINATING BARLEY.
-:- SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 80 VDIEVLGKNPGSFQSNIITGKAGAQKTSEKHHAVSPAADQAFHTYGLEWTPNYVRWTVDG 139

Plant Physiol. 104:161-170(1994).
-!- FUNCTION: POSSIBLE ROLE IN BRASSINOSTEROID-STIMULATED ELONGATION.
             CATALYTIC ACTIVITY: Hydrolysis of 1,4-beta-D-glycosidic linkages in beta-D-glucans containing 1,3- and 1,4-bonds. SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

-!- FUNCTION: Involved in cell wall reconstruction.

-!- TISSUE SPECTRICITY: EXPRESSED IN SHOOT APICAL MERISTEMS, ALSO

-!- SIMILARITY: BELONGS AND MERISTEMS.

-!- SIMILARITY: BELONGS TO FAMILY 16 OF GLYCOSYL HYDROLASES.

-!- CAUTION: Ref. 1 sequence differs from that shown due to frameshifts in positions 158: 178: 189: 189: 190: 194 and 199.

-!- CAUTION: Ref. 6 sequence differs from that shown due to frameshifts in positions 93 and 104. Ξ, STRAIN-cv.
